

STAROŃ & PARTNERS

Staroń & Partners has had the pleasure of using the LitigationExpert™, now called LEXA™, for discovery and complex litigation support. We had a pleasure to collaborate and provide feedback on various features like case timeline views.

LEXA™ online system supports all aspects of case management and streamlines the pre-trial litigation. We can strongly recommend the solution. It is a flexible and customizable online service that meets our expectations, designed to handle large cases with thousands of documents and events, and provides summary dashboards tailored to various roles. LEXA has interactive tools for extending functionality and can be used in multiple languages. This browser based system allows global accessibility and supports collaboration sessions with experts and witnesses.

Enfoglobe has responded to our needs very well, including on-site visits. We value their professionalism, speed of customizing the system to our needs, and friendly customer support. We recommend using this solution to streamline complex case management.
