

This interactive online service helps patients better comprehend the risks involved in medical procedures. Informed Consent™ incorporates media-rich content, such as interactive videos, diagrams, animations, and 3-D graphics to illustrate medical procedures and the complications that may arise during them.

EDUCATIONAL MODULES

Quizzes included in each educational module reinforce material. A patient sees his or her progress and can sign informed consent documents in digital form or complete a certificate. Traditional paper-based IC forms are long and explain complicated procedures using medical jargon that most patients do not understand.

PROVIDES INFORMED CONSENT

Patients often sign forms without carefully reading them. This does not legally constitute 'Informed Consent', as the patient is not fully aware of the risks involved and is not in a position to make a truly informed decision.

FEATURES:

- Interactive videos, diagrams, animations, and 3D graphics provide visual understanding of risks
- Live chat and video sessions with doctors for Q&A
- Personalized calendar for doctors and patients with list of scheduled events and treatment timeline
- Quizzes at each module's end reinforce patient understanding and explain incorrect answers
- Notifications sent on patient's willingness to undergo surgery
- Doctor and Nurse Admin portals can tailor content loaded for each patient, then monitor patient progress and communication with medical staff
- Online patient portal shows reminders of upcoming operations and a status bar showing completion of educational modules
- Electronic signature page at the end of training
- Highly secure access and data management

ADVANTAGES:

GREATER PATIENT SATISFACTION

Patients have significantly higher satisfaction with the interactive, computer-based interactive IC process. Such satisfaction may translate into higher satisfaction with the doctor or clinic. Patients satisfied with their clinic are less likely to initiate a law suit.

BETTER UNDERSTANDING

Computer-based visualization of medical procedure significantly improves patients' knowledge and comprehension of the medical procedure and related risks.

LESS ANXIETY AND GREATER SATISFACTION

Multiple studies show that patients feel less anxious when using interactive informed consent as information is clearer and less overwhelming.

TEST RESULTS TO CONFIRM UNDERSTANDING

Testing a patient's understanding after each major stage of treatment assesses the level of understanding and can trigger follow-up actions.

COMMUNICATION WITH MEDICAL STAFF

Chat and Video sessions allow posing questions to medical staff. Direct interaction builds a better relationship with the patient.

INTEGRATION WITH EXISTING ELECTRONIC RECORDS

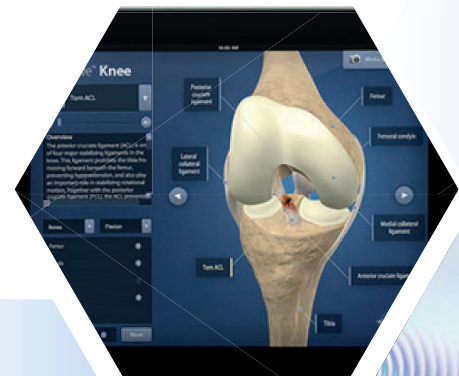

The online platform can be integrated with existing systems.

CUT PAPER COSTS

An online system reduces paper and storage costs dramatically. Signed electronic documents are securely stored online. New modules and quizzes can be added using built-in tools.

ACCESS ANYWHERE

Patient portal provides access anywhere at any time through the Internet using tablets or other mobile devices. InteractiveCare kiosks can be set up right in the doctor's office.
